→ ABOUT US

Our service offerings for your success - focus on the customer

GEORG SCHLEGEL GmbH & Co. KG is a leading supplier of control units to operate machines and devices. For more than 75 years SCHLEGEL has been developing, designing and producing emergency-stop switches, enclosures, control panels, pushbuttons and switches as well as RFID systems, modular bus systems, panel mount jacks and terminal blocks for many industries.

The family company based in Dürmentingen has another production site in Leipzig and sales offices in Austria, Singapore, China and the USA. In addition, SCHLEGEL has distributors in more than 80 countries on five continents. Renowned companies all around the globe have trust in the quality of SCHLEGEL products.

SCHLEGEL products, all "Made in Germany", are characterised by high quality and award-winning design. Our extensive product portfolio in a modular system is perfectly harmonised so that elements of our series allow versatile combinations.

The high degree of independence and high production depth gives us the necessary scope for demanding tasks. Our customers appreciate this flexibility when looking for customised solutions. A close support in the development and production process is just as natural for us as a transparent and fair culture of cooperation.

The company GEORG SCHLEGEL GmbH & Co. KG is a company with tradition which also faces the new challenges of the future with pleasure. With our innovative products we ensure a further development in our target industries. True to the company's motto: "If you stop trying to improve, one day you will stop being good."

→ Flexitast - The innovative display button

→ Details

Flexitast, the revolutionary pushbutton with integrated display is offering versatile and dynamic display options. Being equipped with a 72 x 72 pixel ZBD display, specially developed for SCHLEGEL, and an WRGB backlight, Flexitast enables the flexible display of texts and symbols. Thanks to the special display technology, the screen content stays visible even without power connection. The elegant design and the fact that the display is protected by break resistant glass make the Flexitast an efficient and robust solution for a wide range of applications.

→ The advantages of Flexitast at a glance:

- Special 72 x 72 pixel **ZBD display**
- Display size 26.5 x 26.5 mm, visible area 17 x 17mm
- **Robust construction**, display protected by break resistant glass
- Flexible display of **texts/symbols**
- **RGB backlight**
- **Display content stays visible even without power connection**
- **Excellent illumination** and **display** of texts and symbols even in sunlight
- **No burn-in** of display content, lifetime approx. 10 years
- Integrated temperature sensor (display protection)
- Comfortable haptic and **tactile response**
- Elegant design
- **Sustainable and environmentally** friendly (no plastic nameplates necessary)
- **Saves time and costs** in procurement and storage (only one product necessary)
- More than 1 million switching cycles, degree of protection IP65,
operating temperature -10 °C to 50 °C

Front dimension:	Ø 23.5 mm

→ EMERGENCY-STOP

Emergency-stop switches with illuminated active/inactive status indication

The emergency-stop switches from SCHLEGEL meet the requirements of DIN EN ISO 13850:2015 and ensure highest safety in modular plants. Their illuminated status indication makes the operating status clear at any time:

- Active: The emergency-stop is illuminated in red/yellow and signals readiness for operation
- Inactive: Without illumination, the actuator is grey and is not recognised as an emergency-stop – actuation of an inactive emergency-stop is prevented effectively

Where is it practical to use an active/inactive emergency-stop switch?

- Mobile applications:
Especially in the case of wireless controls, it must be clearly evident if the emergency-stop is still operational
- Modular plants:
With active/inactive emergency-stop switches, active modules can be clearly identified
- Better perceptibility:
People with colour blindness or impaired vision can identify an active emergency-stop easier and quicker

... why active/inactive?

Before the standard DIN EN ISO 13850:2015 came into force, an inactive emergency-stop had to be covered or locked away in order to prevent the inactive emergency-stop from being activated unintentionally in the event of danger. Since the EN ISO 13850:2015 came into force, emergency-stop switches can indicate the actual operating status by a red illumination of the mushroom head.

- A mix-up of active and inactive emergency-stop switches can be excluded
- Inactive emergency-stop switches no longer have to be covered or locked away
- Very good visibility, even in poor light conditions

Safe and optically appealing emergency-stop buttons

The user can choose from a wide range of TÜV certified emergency-stop buttons of SCHLEGEL for panel cut-outs of different shapes and dimensions (16.2 mm, 22.3 mm, 30.5 mm ...) which can be combined with both the standard and ASi contact blocks. The emergency-stop buttons are well-known for their modern and attractive design combining mechanical robustness and outstanding functionality, featuring e.g. a clearly visible switching position indicator, a twist release (in either direction) or pull release and tightness from IP65 up to IP69K, depending on the model.

Automatic switch off on separation of the contact block from the emergency-stop button

These are the characteristics of the emergency-stops of SCHLEGEL:

- The emergency-stops are TÜV certified and comply to the norms EN 13850 and EN60947-5-5
- Panel cut-outs: Ø 16.2 mm, Ø 22.3 mm, Ø 30.5 mm as well as 23 x 23 mm, 24 x 24 mm, 26 x 26 mm
- Clearly visible switching position indicator
- Twist to release (in both directions) or release by pulling
- Degree of protection is IP65 to IP69K, depending on the type
- Contact blocks with positive opening acc. to EN60947-5-1, one or two channel versions are available
- Even low currents (5 mA at 24 V or less) can be switched reliably
- Available for standard contact blocks as well as for AS-Interface (Safety@Work)

→ PANEL MOUNT JACKS

Creating connection: The interface technology of panel mount jacks enables us to cross technical barriers easily to get access to machines. Panel mount jacks connect separate systems and enable data to be exchanged across system boundaries.

SCHLEGEL offers a broad variety of panel mount jacks with a variety of connection types for different panel cut-outs and also variants with low mounting depth to be able to meet a wide range of customer requirements.

→ protective lid made of TPE (IP67)

→ protective **lid sealable** (IP67)

→ **robust** protective **lid sealable** (IP65/IP67)

→ **robust** protective lid

degree of protection IP69K

These are the characteristics of the panel mount jacks of SCHLEGEL:

- Many connection types: USB, RJ45, HDMI, M12, LWL
- Panel mount jacks for 5 series (Rontron-R-Juwel, Rontron-Q-Juwel, Oktron-Juwel, Quartron-Juwel, Kombitast-R-Juwel)
- For panel cut-out 22.3 mm, 23 x 23 mm, 24 x 48 mm, adapter plate for 30.5 mm panel cut-out available (depending on series)
- With cable or direct connection
- Less mounting depth
- Suitable accessories

→ **2BSecure** Maximum security for USB and ETHERNET interfaces

Machines and systems are more and more networked, which increases the risk of unauthorised access and cyber attacks. The new EU Machinery Regulation 2027, the CRA (Cyber Resilience Act) and the NIS-2 Directive contain strict cybersecurity regulations. Companies are obliged to comprehensively protect their machines against attacks and manipulation.

2BSecure, the innovative security solution for controlling USB and ETHERNET interfaces, offers the perfect answer.

→ INDUSTRIAL NETWORKS

Fieldbus systems, industrial Ethernet and also IO-Link are already part of the industrialised field. Thus, SCHLEGEL has developed a modular bus system (MBS) that can be integrated universally in many networks. The MBS allows to control and operate up to 128 command points, for example pushbuttons, selector or key switches, pilot lights etc. With the MBS, operator panels or control devices can be equipped quickly, flexibly and with less cabling effort.

These are the characteristics of the modular bus system of SCHLEGEL:

- Direct integration of pushbuttons, pilot lights and switches in industrial networks
- Only one connection for up to 128 pushbuttons, pilot lights and switches
- Basic module can be extended by up to 15 bus independent I/O modules
- Minimum wiring effort, saving time and money
- Higher flexibility: individual adaption by customised modules
- Easy and cost-effective change of the bus system by exchanging the basic module
- SCHLEGEL offers standardised modules suitable to the individual series in a grid of 25 x 25 mm / 27 x 27 mm / 30 x 30 mm
- No rigid system: if the requirements change, the MBS can be expanded at any time
- Versatile: thanks to its structure, the MBS is suitable for many fields of application

The SCHLEGEL MBS is available for the following systems:

- | | |
|----------------|----------------|
| → AS-Interface | → Profinet I/O |
| → CANopen | → Ethernet IP |
| → Profibus | → IO-Link |
| → EtherCAT | → Powerlink |

Compact gateway for Industrial Ethernet

For the use of Industrial Ethernet systems like Profinet, Ethernet/IP, EtherCAT or Powerlink SCHLEGEL has developed a gateway with an internal 2-port switch that includes an RFID interface and AD converter in addition to the bus node. Additional advantage of the gateway: It is very compact and therefore can be placed wherever it suits to fulfil functions like RFID user management or to connect a potentiometer. The RFID control inside the gateway is based on the transponder management system (TMS) of SCHLEGEL.

Extension module with RFID control

The extension modules for the Industrial Ethernet systems also have an integrated RFID controller that works in a similar way as the gateway. An RFID reader can be connected to the 8 inputs. The data read from the transponder and processed by the RFID control are directly transmitted to the connected Industrial Ethernet. The 8 I/Os can be used to add further control or operating elements. 2 I/Os are for the control of the illumination ring of the RFID reader, 6 I/Os for high loads, e.g. industrial lamps or valve terminals, in total up to 1 A.

→ RFID SYSTEMS

With a SCHLEGEL RFID system, processes can be controlled easily and securely or access authorisations can be managed. The wear-free RFID technology (Radio Frequency Identification), which is based on the principle of contactless communication via radio waves, opens up a wide range of possible applications: time recording, driver identification, ticket recording, access control, machine control, charging stations, customer or goods identification, product protection, data acquisition, key switch replacement, object acquisition/management.

An RFID system consists of a control, a reading device and a transponder (so-called tag) with an integrated microchip for data storage. This allows transmitting and analysing person- or product-specific information.

These are the features of the RFID systems of SCHLEGEL:

- **Reliable:** wear-free, very robust and insensitive to environmental influences
- **Simple:** fast integration into processes and systems
- **Flexible:** extensive application possibilities in industrial environments and other fields
- **Safe:** thanks to a contactless communication via a globally unique transponder UID
- **Minimised safety risk in case of loss:** the transponder (key) is being removed from the system and replaced by a new one
- **Uncomplicated** and **flexible** to manage
- You will find the suitable system for you: SCHLEGEL offers 3 variants of RFID systems

3 system variants

RFID-System					
Features	Standard	SKS		TMS	
Variant	-	TRA	TCA	TRA	TCA
Field of application	for individual, special requirements, flexibly and freely configurable	for a simple and fast integration into existing operating environments		for a flexible application in fields with complex requirements, with software for managing the transponders

Management software	✗	✗	✗	✓	✓

* in theory, an unlimited number is possible

** via the modular operating concept of Schlegel for the following fieldbus systems: Profibus, Profinet, CANopen, Ethernet IP, EtherCAT, Powerlink, IO-Link and AS-Interface

Available accessory for SCHLEGEL RFID systems

Illuminated rings

Illuminated holders for drop-shaped or card-type transponders to display the status of the system clearly and instantly

→ ENCLOSURES

SCHLEGEL offers high-quality enclosures made of **stainless steel** and **plastic**. Our enclosures offer plenty of space inside and best protection against external influences. SCHLEGEL enclosures have a degree of protection from IP65 to IP69K.

Our new enclosure series probbox, which has been awarded with several design prizes, convinces as a miracle of flexibility. The assembled enclosures are available for four different systems: conventional wiring, IO-Link, AS-Interface and wireless. All systems are equipped with two M12 connectors. The probbox is designed for up to 4 pushbuttons and switches and is also supplied as an empty enclosure.

Insulated plastic enclosures (SIL...)

Emergency-stop control stations (SIL...)

Insulated enclosures (proboxx)

Stainless steel enclosures (S4...)

Compact enclosures

AS-Interface emergency-stop enclosures (SIL...)

Equipped insulated enclosures (IRF..., IRL...)

Insulated enclosures (DIRL...)

These are the characteristics of the enclosures of SCHLEGEL:

- Large variety of materials, suitable for every application
- Enclosures available for panel cut-out 16.2 mm, 22.3 mm, 30.5 mm, 23 x 23 mm, 24 x 24 mm or 26 x 26 mm
- For up to 8 pushbuttons or switches
- Degree of protection from IP65 to IP69K, depending on the enclosure series
- Depending on the series various types of connections are possible: cable feed-through, M12, bus system, wireless
- Available as empty or equipped enclosure in various sizes: from compact to robust

→ WIRELESS SYSTEMS

proboxx

In working environments where cable connections are undesirable or not possible, a wireless solution is the technology of choice. Therefore the new proboxx enclosure series is also offered as a wireless version with a radio interface in order to control machines or operate devices. The wireless solution is uncomplicated to use and also safe even in case longer distances have to be bridged.

The radio system consists of a transmitting unit and a receiving unit based on Steute's well-established sWave technology. The transmitter electronics is operated with a long-life battery. The successful switching is indicated by a status LED.

These are the characteristics of the proboxx wireless solution:

- Frequency range 868 MHz (approved for the EU and China)
- Range of up to 450 m in the open field and up to 40 m indoors
- Up to 40 transmitter units (pushbuttons, switches) can be managed with one receiver
- LEDs for status indication (battery monitoring)
- Receiver with 4 potential-free relay outputs (NO)
- Learning mode (assignment of outputs)

→ PEDAL SWITCHES

Robust light metal enclosures with extreme durability characterise the pedal switches of SCHLEGEL. Pedal switches are used as alternative operating devices on systems and machines where a manual operation of the button is not possible or makes no sense.

These are the characteristics of the pedal switches of SCHLEGEL:

- Red pedal covering the whole switch, with anti-slip crosswise ribbing
- Equipped with an oil and chemical resistant rubber membrane which is protectively placed
- Tightness against dust and humidity as well as hose water acc. to IP65
- With stroke limitation to protect against mechanical overload
- Protection class: II (protective insulation)
- Usable in extreme temperatures from -30 °C to 70 °C
- Mechanical lifetime: 1 million switching cycles
- Electrical lifetime (rated load): 1 million at 250 V/10(6) A

→ CUSTOMISED SOLUTIONS

Does your control panel or control station have special requirements in terms of design and functionality? If standard products do not fit, our R&D will be involved. Do not hesitate to approach us with tricky challenges: With our extensive experience as a manufacturer of electrical controls and the know-how gained from numerous successfully implemented projects, we are your competent partner. We develop your individual solution together with you - from a unique contact assembly to a completely in-house manufactured plug-and-play product.

Our development staff work closely with the customer to find solutions. Based on our extensive range of pushbuttons and switches, we can implement tailor-made, customer-specific variants.

Tailor-made SCHLEGEL control desks, mobile panels or control panels are used in a number of industries - in mechanical engineering as well as in medical technology, vehicle construction or for controlling ships.

SCHLEGEL offers these advantages:

- Extensive SCHLEGEL portfolio of pushbuttons and switches as a basis
- Products individually manufactured according to customer requirements
- Many individual components are possible
- Panel solutions can also be realised with different bus systems
- The connection on the pushbutton or switch can be provided with a connecting system or interface according to customer's request
- All from a single source

Get in touch with us

We will advise you in detail
and without obligation

Together with you we will find a
suitable solution to achieve the
best result
